

# Presentation with sound

## Example for Beamer

Tatiana

University of Leicester

August 21, 2016

# Structure

# Insert file as sound

Sound file can be easily added to every slide of the presentation using command `\sound`.  
see Manual page 130

It can be played from the very beginning of the slide...

... or it can be played if *button* (below) is pressed...

*button*

... or it can be played using *Beamer button* and `\hyperlink` command.

[Play Sound](#) (press it)

Or you can keep control in your hands and define where to play sound and duration...

## Theorem

*It is possible to play sound piece-wise*

- 1 *present the 1st piece;*
- 2 *no sound on this piece;*
- 3 *present the last piece*

## Theorem

*It is possible to play sound piece-wise*

- 1 *present the 1st piece;*
- 2 *no sound on this piece;*
- 3 *present the last piece*

## Theorem

*It is possible to play sound piece-wise*

- 1 *present the 1st piece;*
- 2 *no sound on this piece;*
- 3 *present the last piece*

## Theorem

*It is possible to play sound piece-wise*

- 1 *present the 1st piece;*
- 2 *no sound on this piece;*
- 3 *present the last piece*

And, finally, add some more comments

# Insert sound as movie

Sound file can be added using `\movie` command.

See Page 125 for more options.

In this case it is possible to control the file with buttons

play

pause

resume

stop

but you need more time for this slide to be on the screen

`\transduration{60}`

( This slide is staying on the screen for 60 seconds)

show must go on...
